# Rush Division of Plastic and Reconstructive Surgery

## State-of-the-art care by surgeons who change lives

The expert team in the Rush Division of Plastic and Reconstructive Surgery treats patients of all ages, from infants to seniors, and has expertise in every area of the body from head to toe. We focus on maximizing form, function and quality of life through repair of congenital differences, reconstruction after trauma or cancer treatment and cosmetic procedures that boost self-confidence.

## When to refer

We welcome referrals of all patients who seek cosmetic procedures of the face and body, as well as those who have any of the following:

- Craniofacial differences
- Facial deformities, injuries and asymmetry
- Facial pain
- Facial paralysis
- Genitourinary abnormalities
- Lipomas and cysts
- Lymphedema
- Migraines
- Need for reconstruction following breast cancer surgery
- Nerve entrapment
- Skin cancer
- Sleep apnea
- Trauma of the extremities, including the hands
- Vascular malformations
- Wounds, scars and burns

## What to expect

**Leading-edge expertise for complex cases.** Our surgeons are highly trained experts who perform surgeries that few others in the Chicago region are able to offer, including procedures to relieve facial pain, microvascular surgeries for reconstruction after cancer treatment, and complex cranioplasties. We also have expertise in state-of-the-art technology, including virtual surgical planning and 3D printing technology, that assists with surgical accuracy and outcomes.

**Timely, collaborative care.** We make a point of seeing your referred patients quickly. And we can work with you in whichever way you prefer: We can consult, co-manage the patient, or fully manage their surgery and recovery before returning them to your care.

**A multidisciplinary approach.** At Rush, we are dedicated to individualized, patient-centered care and work closely with specialists in other departments, including orthopedics, neurological surgery, oral and maxillofacial surgery, ENT, dermatology, surgical oncology, pediatrics and physical therapy. Every patient receives a thorough evaluation, a comprehensive treatment plan and detailed care coordination.
