Rush University Medical Center

Bone Marrow Transplant and Cellular Therapy Program

Excellence in Bone Marrow Transplant

A leader in quality
Rush is accredited by the Foundation for the Accreditation of Cellular Therapy (FACT) — the highest level of accreditation that recognizes Rush’s compliance with quality standards for cell collection, laboratory processing and transplantation. Rush is one of 294 institutions around the world to receive this accreditation.

Aetna Institute of Excellence
Rush University Medical Center is one of four medical centers in Illinois to be named an Aetna Institute of Excellence for Transplant. This designation is given to hospitals that meet exceptional quality outcomes and complete a minimum of 40 adult bone marrow transplants per year.

Exceptional outcomes and clinical research
Rush is at 100% survival for the first 180 days after autologous transplant and >90% in allogeneic hematopoietic cell transplantation. Our high survival rates have been confirmed by the Center for International Blood and Marrow Transplant Research registry. Our continuous clinical research activities are helping us work on improving outcomes (e.g., relapse prevention studies in FLT3 AML patients) for our patients.

CAR-T therapy
Rush offers CAR-T cell therapy for patients who have relapsed refractory lymphoma or acute lymphoblastic leukemia. Rush was the second center in Chicago to be certified to offer tisagenlecleucel (Kymriah) and is also certified to offer Axicabtagene ciloleucel (Yescarta). We also offer CAR-T clinical trials for other hematologic conditions (e.g., multiple myeloma).

Multidisciplinary care
Rush has a dedicated team of BMT experts that includes hematologist-oncologists, advanced practice providers, nurses, dietitians, pharmacists, transplant nurse coordinators, financial specialists and social workers. We also have a dedicated BMT psychologist who partners with patients and their loved ones to address the physical, emotional and social challenges associated with these treatments.

Fast-Track Clinic
Rush’s innovative BMT fast-track clinic helps facilitate patients to safely transition from inpatient to outpatient care and return home early. Housed in the inpatient BMT unit at Rush University Medical Center, the fast-track clinic functions as an outpatient clinic for BMT patients who require frequent follow up, labs and infusions during the first few months after transplant. The clinic is open year-round, including weekends and holidays, to manage acute situations and limit the need for emergency room visits and admissions.

To refer a patient to Rush, call BMT program coordinator Emilee Moeke, RN, at (312) 942-6028.
Conditions We Treat

• Acute lymphoblastic leukemia (ALL)
• Acute myeloid leukemia (AML)
• Acute promyelocytic leukemia (APL)
• Advanced systemic mastocytosis
• Anemia
• Aplastic anemia
• Bone cancer (bone sarcoma)
• Chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL)

We also have active clinical research underway for patients who have autoimmune diseases, such as multiple sclerosis and scleroderma.

Treatments We Provide

• Allogeneic stem cell transplantations
• Autologous stem cell transplantations
• CAR-T cell therapy
• Cord blood transplantation
• Haploidentical transplantation
• Integrative medicine
