Our team of plastic surgeons at Rush University Medical Center have expertise in microvascular surgery, which can greatly mitigate the debilitating symptoms patients experience with lymphedema. Patients can spend the majority of their day attending to treatment, such as receiving massage, applying compression bandages and stockings and performing pneumatic pumping, in order to regain basic functional wellness and fit comfortably in their own clothes.

Our surgeons offer two main microvascular procedures: lymphovenous bypass and vascularized lymph node transfer. Lymphovenous bypass reroutes lymphatic channels around damaged lymph nodes and connects them directly into a person’s veins. Vascularized lymph node transfer transplants healthy, nonessential lymph nodes from the groin, abdomen or other parts of the body as vascularized flaps to replace affected lymph nodes. This rewrites the normal drainage function of the lymphatic system.

Who is an ideal candidate for microvascular surgery?

- Patients newly diagnosed with breast cancer who are about to undergo a mastectomy (lymphovenous bypass can be used as a preventative treatment for lymphedema);
- Patients post-mastectomy still in need of breast reconstruction who developed lymphedema
- Patients with early stage lymphedema who have demonstrated improvement with lymphedema therapy

Why refer your patients here?

**Surgical expertise:** Our providers are specially trained in the prevention and treatment of lymphedema, including microsurgical lymph node transplantation and lymphovenous bypass. We are also specialized in immediate lymphatic reconstruction, which is performed in an attempt to lower the risk of lymphedema in patients undergoing axillary lymph node dissection.

**Advanced diagnostics:** We offer the latest diagnostic technology, such as lymphoscintigraphy, MR lymphography and ICG lymphangiography, which uses a fluorescent dye to trace lymph drainage, pinpoint blockages for potential by-passes and identify working lymphatic channels.

**Well-rounded care:** Through our partnership with Select Medical, certified lymphedema therapists can assess impairments in upper arm motion, pain and swelling and activities of daily living in order to provide complete decongestive therapy for breast cancer survivors.
Meet our team

George Kokosis, MD  
Plastic and Reconstructive Surgery  
Board certifications: Plastic Surgery, Surgery

Deana Shenaq, MD  
Plastic and Reconstructive Surgery  
Board certifications: Plastic Surgery

David Kurlander, MD  
Plastic and Reconstructive Surgery  
Board eligible: Plastic Surgery
