PGY1 Residency Program
2016-2017

Core Rotations
- Adult Internal Medicine (4 weeks)
- Adult Infectious Disease (4 weeks)
- Practice Management (4 weeks)
- Clinical Management (4 weeks)

Core Selective Rotations (choose one from each subset)
- Adult Critical Care: (4 weeks)
  - Medical Intensive Care
  - Neuroscience Intensive Care
  - Cardiac Intensive Care
  - Surgical Intensive Care
- Immunology: (4 weeks)
  - Hematology/Oncology
  - Solid Organ Transplant
- Pediatrics: (4 weeks)
  - General Pediatrics
  - Pediatric Intensive Care
  - Neonatal Intensive Care

Longitudinal Experiences

Teaching Opportunities:
- Teaching Certificate with UIC
- Didactic lectures opportunities
- Precepting IPPE and APPE students
- Technician CE lecture
- Patient case and journal club presentations

Residency Research Project:
- Choose project of interest, write protocol, collect data, analyze results and present at regional residency conference in the spring

Policy/Management:
- Pharmacy and Therapeutics Committee minutes
- Policy/Guideline development
- Medication Utilization Evaluation project
- State/National Organization Committee involvement
- Pharmacy and Therapeutics Subcommittee membership

Pharmacy Services:
- On-Call Program (in house every 14th night)
- Practice Obligation: every 4th weekend, evening every 14th night, and evening of on-call shift
- Pager Coverage: Anti-Infective Approval, Code Blue, Rapid Response Team, Stroke

Rush University Medical Center
Innovation • Collaboration • Accountability • Respect • Excellence

Rush is a not-for-profit academic medical center located just west of downtown Chicago in the Illinois Medical District. Rush University Medical Center encompasses a 664-bed hospital serving adults and children, including the Johnston R Bowman Health Center, which provides medical and rehabilitative care to older adults and people with short- and long-term disabilities, as well as a comprehensive outpatient cancer center. Our patient care tower with a state of the art emergency room was opened in January of 2012.

Rush University is home to one of the first medical colleges in the Midwest and one of the nation’s top-ranked nursing colleges, as well as graduate programs in allied health, health systems management and biomedical research. In addition, there are affiliation agreements in place among Rush’s Department of Pharmacy and the pharmacy schools in the Chicagoland area, including Midwestern University, Chicago State University, Roosevelt University, Rosalind Franklin University and University of Illinois at Chicago.

Along with the hospital, the pharmacy has undergone a large transformation and established a new practice model that provides clinical services 24/7. Our model includes clinical specialists, residents, pharmacy students, and faculty from colleges of pharmacy working together as a team. We have pharmacists dedicated to acute care, critical care, pediatrics, operations, ambulatory care, and geriatrics/psychiatry that round with the medical team, verify orders, and provide clinical services. Distribution is driven by technicians and technology and overseen by pharmacists, utilizing robotic IV preparation systems, telepharmacy, and dispensing carousels.

In addition:

- For more than 170 years, Rush has been leading the way in developing innovative and often life-saving treatments. Today, Rush is a thriving center for basic and clinical research, with physicians and scientists involved in hundreds of research projects developing and testing the effectiveness and safety of new therapies and medical devices. This unique combination of research and patient care has earned Rush a position in the U.S. News and World Report as among the top hospitals in the country and #2 in the State of Illinois.
- Five years in a row, Rush has ranked in the top 10 in the University HealthSystem Consortium (UHC) annual Quality and Accountability study. More than any other hospital in the state of Illinois.
- As a leader in quality and patient safety, Rush was awarded 4 out of 5 stars on the Centers for Medicare and Medicaid Services’ Overall Hospital Quality Star rating, ranking Rush higher than any other academic medical center in the Chicago area.
- Rush also is proud to be the preferred hospital and home to the team physicians for both the Chicago White Sox and the Chicago Bulls.
PGY1 Pharmacy Residency Program

Rush has had an ASHP accredited pharmacy residency program in place for over 30 years. Currently there are 8 PGY1 residents. In addition, Rush also has PGY2 residency programs in critical care, hematology/oncology, infectious disease and solid organ transplant.

PGY1 PURPOSE STATEMENT

Pharmacists completing the PGY1 residency program at Rush will be competent practitioners responsible for medication-related care of patients with a wide range of conditions, eligible for board certification and eligible for postgraduate year two (PGY2) pharmacy residency training.

PGY1 PHILOSOPHY AND GOALS

Philosophy
The PGY1 residency program provides in-depth professional, patient-directed training and experience at the post-graduate level. It offers the resident the opportunity and stimuli to develop, to the highest degree attainable, his/her professional expertise as a clinical practitioner, emphasizing skills required to optimally deliver pharmaceutical care. In addition, the resident will be exposed to the management of a pharmacy department and gain insight into the responsibility one has toward accepting leadership and making a contribution back to the profession of pharmacy.

A basic tenet of our philosophy of training is that while being experientially based and focused, the residency program does not exist exclusively to provide service to the department or hospital per se. All service components of the department’s program can function in the absence of residents’ participation. Residents are critical to our department’s vitality and professional development.

Goals
The residents are expected to contribute substantially to the achievement of the department’s mission through active and innovative participation in assigned projects which also meet residency training objectives. We do not believe that these are mutually exclusive. An overarching goal of the residency training program is the development of a personal philosophy of practice which will facilitate the provision of pharmaceutical care in their respective careers. This is guided by critical thought and patient advocacy in all aspects of drug therapy.
The residency program is designed to comply with the officially published accreditation standards of the American Society of Health-System Pharmacists (ASHP). Efforts to provide the specific training and guidance that is optimal for a particular resident are extended whenever appropriate, feasible and mutually agreed upon by the resident, Residency Program Director (RPD) and Pharmacy Director. A demonstrable desire to learn, a sincere career commitment to pharmacy practice, and a dedication to fully meeting all objectives and requirements of the program are basic expectations of all residents.

Residents are expected to actively and directly participate in a balanced array of clinical and practice management activities during required assignments. This participation may take the form of weekend/holiday presence and/or projects directly related to the provision of patient care services and/or participation in Department of Pharmacy programs.

Preceptors are responsible for assuring that this participation provides the resident with a high degree of project and/or patient specific case management involvement. Projects are assigned or selected with the dual purpose of benefit to patients and learning/experiential value to the resident. Appropriate guidance and instruction is provided by the preceptor while the resident is participating in such activities, as well as during learning experiences such as lectures, conferences, in-services and seminars. Other relevant activities include departmental evaluation, planning, and clinical service implementation efforts and interdepartmental activities.
