Residency Program: The combined PGY1&PGY2 Health-System Pharmacy Administration and Leadership Residency Program is a two-year residency established to provide specialty training for residents interested in health-system pharmacy administration. As a PGY1, the pharmacy resident will complete all the requirements of the PGY1 pharmacy practice residency at Rush University Medical Center. Experiences are tailored to the individual resident's background and interests. As a PGY2, the pharmacy resident will be exposed to a variety of practice areas including Clinical Pharmacy Services and Formulary Management, Inpatient Pharmacy Operations, Medication Safety and Pharmacy and Hospital Administration. The PGY2 programs at Rush include critical care, emergency medicine, hematology/oncology, internal medicine, pediatrics, and solid organ transplant.

Purpose Statement: PGY2 residency programs build upon Doctor of Pharmacy (PharmD) education and PGY1 pharmacy residency training to develop pharmacist practitioners with knowledge, skills, and abilities as defined in the educational competency areas, goals, and objectives for advanced practice areas. Residents who successfully complete PGY2 residency programs are prepared for advanced patient care or other specialized positions, and board certification in the advanced practice area, if available.

Mission Statement: The mission of the Rush PGY1&PGY2 Health-System Pharmacy Administration and Leadership Pharmacy Residency (HSPAL) is to graduate compassionate pharmacy leaders who excel as both clinicians and leaders. The Health-System Pharmacy Administration and Leadership Residency at Rush University Medical Center will provide the resident with a well-rounded experience and is designed to develop the resident's leadership expertise in managing a pharmacy department through a variety of core and elective rotations. Additionally, residents will have opportunities to gain experience in teaching, research, and quality improvement.

Administration Experience: The PGY1&PGY2 resident will have the opportunity to participate in organizational leadership in an academic teaching environment. The resident's foundation in pharmacy leadership will be developed through leadership in a pharmacy department that manages a 32-million-dollar annual drug budget with almost 4 million inpatient doses dispensed annually. Rush University Medical Center encompasses a 664-bed hospital serving both adults and children. As a PGY2, the HSPAL resident will have the opportunity to manage a system-wide project.

Research Experience: The PGY2 resident will be expected to complete a longitudinal leadership project suitable for publication in collaboration with an experienced preceptor. The project will be a department or Hospital Quality Improvement/Performance Improvement initiative. The project will be presented at a regional residency conference and/or other pharmacy conference.

Teaching Experience: The PGY2 resident will serve as a preceptor for Doctor of Pharmacy students from local colleges of pharmacy. The resident will also lead organized group discussions with pharmacy students and PGY1 residents. There may be opportunities to lecture at local colleges of pharmacy.

Staffing Experience: The PGY2 resident will be responsible for staffing every fourth weekend, 1 major and 1 minor holiday as the pharmacist-in-charge.

Pharmacy Administrator on Call: The PGY2 resident will be expected to rotate through covering the pharmacy administrator on call pager Monday-Friday. Responsibilities include, but are not limited to, participating in Hospital Incident Command, reviewing non-formulary medication requests, managing operational/staffing efficiencies and regulatory monitoring.
